PROFILE

I build web applications with JavaScript, React and Firebase, connecting interfaces to authentication, stored data and APIs. My project work covers an online clothing store, a browser game and a React portfolio with interactive 3D content. I am seeking a junior full-stack role where I can implement features across the interface and data layer.

TECHNICAL SKILLS

Frontend: JavaScript (ES6+), React, HTML5, CSS3, responsive layouts, CSS Grid, Flexbox

Backend and data: Firebase Authentication, Cloud Firestore, REST API integration

Tools: Git, GitHub, Chrome DevTools, VS Code, Figma, Vite, Vercel, Netlify

PROJECT EXPERIENCE

Urban Threads | E-commerce application

HTML, CSS, JavaScript, Firebase Authentication, Cloud Firestore

- Connected account sign-in with Firebase Authentication and used Firestore to store product and user data.
- Built cart and checkout flows, bringing product selection and order steps into a responsive shopping interface.

Personal Portfolio | React application

React, JavaScript, Three.js, Vite, CSS

- Organised Home, Personal and Python Lab into separate routes, with project case studies, source links and live previews.
- Integrated a 3D character with cursor tracking and reduced-motion support; used lazy loading and rendering cleanup to control resource use.
- Documented project context and implementation choices in case studies so readers can assess the work alongside the source code.

Tic-Tac-Toe | Browser game

HTML, CSS, JavaScript

- Implemented turn handling, winner detection and replay, keeping game state and the visible board in sync.

EDUCATION

Full Stack Web Development Programme | iHub Africa

Coursework: frontend development, JavaScript, Firebase, Git, responsive web design and software development practices.
